DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 8-13-02 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Additionally, the information disclosure statement filed 8-13-02 fails to comply with 37 CFR 1.98(b)(5) which requires the applicant to identify the date of the publication. It has been placed in the application file, but the information referred to therein has not been considered.

Election/Restrictions

Applicant's election of Group II in Paper No. 4 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gilding (4,049,506) in view of Evans (4,950,365). Gilding teaches preparing a wire bonding capillary by providing a wire bonding capillary for pressing wire against an electrode pad comprising a capillary tip having a pressing face (Figure 3, item 13); and coating part of the face with face of the tip is coated with a layer of Nickel or gold (Figure 3, Item 14 and Column 5, Lines 25-34), Gilding does not teach the coating to be poly-p-xylylene. Evans teaches using a the use of a poly-p-xylylene (Column 3, Line 59 to Column 4, Line 30). It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the coating of Gilding with the parylene coating in order to obtain good corrosion resistance (see Evans column 3, Lines 59-65).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
